

# stppSim - An R Package For Synthesizing Spatiotemporal Point Patterns

by Monsuru Adepeju

**Abstract** An abstract of less than 150 words.

## Introduction

Introductory section which may include references in parentheses ([R Core Team, 2012](#)), or cite a reference such as [R Core Team \(2012\)](#) in the text.

## Section title in sentence case

This section may contain a figure such as [Figure 1](#).

**Figure 1:** The logo of R.

## Another section

There will likely be several sections, perhaps including code snippets, such as:

```
x <- 1:10  
plot(x)
```

## Summary

This file is only a basic article template. For full details of *The R Journal* style and information on how to prepare your article for submission, see the [Instructions for Authors](#).

## About this format and the R Journal requirements

`rticles::rjournal_article` will help you build the correct files requirements:

- A R file will be generated automatically using `knitr::purl` - see <https://bookdown.org/yihui/rmarkdown-cookbook/purl.html> for more information.
- A tex file will be generated from this Rmd file and correctly included in `RJwrapper.tex` as expected to build `RJwrapper.pdf`.
- All figure files will be kept in the default `rmarkdown*_files` folder. This happens because `keep_tex = TRUE` by default in `rticles::rjournal_article`
- Only the bib filename is to be modified. An example bib file is included in the template (`RJreferences.bib`) and you will have to name your bib file as the tex, R, and pdf files.

## Bibliography
